

ARE YOU READY TO TAKE YOUR MOTORSPORT TRAINING TO THE **NEXT LEVEL?**

Baseline Driver Training offers a vast amount of race data from real life cars and circuits. Using your simulator at home, you are able to practice your pedal technique using our science-based approach to working with your muscular memory.

You can also import your own data from real life datalogging tools as well as data from popular simulators such as iRacing, Assetto Corsa etc. This way, you can practice the exact scenario that you need to perform in a race situation.

Core Features:

- Practice optimal brake and throttle traces
- Standard traces included from real life cars and circuits with more than 700 variations available
- Import your own brake and throttle traces from data loggers or racing simulators
- Access to our huge online training universe

You control your car with your throttle and your brakes, not with your steering wheel. The steering wheel decides whether your car goes to the left or to the right, but it is your pedals that control your car's weight distribution and create more or less grip.

Tommy Schröter
Founder of Baseline Driver Training

HOW IT WORKS

You will not see a racetrack nor a race car when using Baseline Driver Training. This is very much on purpose - we have taken away all distractions to make you focus on the job at hand. When you open the application, you will need to select the traces you want to practice - either a single or a sequence of traces - the speed of them, and how many times you want to repeat them in your session. That's all - move on to get the practice done!

What you will see is your brake and/or throttle traces displayed on the screen in front of you. By using your simulator pedals, your job is to follow the traces as precise as you possibly can.

This way of practicing is combining the knowledge of muscle memory with **K. Anders Ericsson's theory of Deliberate Practice**. If you commit to 15 minutes of daily, deliberate practice within Baseline Driver Training, you will almost definitely experience a better pedal control and a higher mental capacity while racing. The software is already being used by drivers ranging from karting to international formula and endurance drivers with great effect.

With Baseline Driver Training you are given the opportunity to **change your own setup** instead of your car's setup. You will have the chance to constantly improve your skill set and your own abilities and the way you handle the car. This setup will accompany you for the rest of your life, no matter what car you drive, whereas if you only change the car's setup, it will only work here and now, because the conditions change all the time.

About Baseline Driver Training

After 25 years as a racing driver, Tommy Schröter introduced coaching into Danish motorsports and became the first and highest trained motorsport coach in Northern Europe. Working with clients such as Nicki Thiim (Aston Martin Racing), Frederik Vesti (Mercedes-AMG Petronas F1 Reserve Driver) and Sergio Sette Camara (F2), Tommy understands what it takes to reach the pinnacle of motorsports. He has also worked with numerous gentlemen and bronze drivers, helping them to reach higher levels of competence.

Baseline Driver Training is taking 25 years as a racing driver and +10 years of coaching experience and combining them into a world's-first training software for racing drivers at all levels. Under continuous development, Baseline Driver Training aims to change the way racing drivers practice.

Subscriptions start from €10 per month (Annual Plan).
